

Blind Tiger Retrospective

Printed from Asana

Time

Active communication between engineering and design helped saved a lot of time while implementing bug fixes

AB

I was stuck working alone for a long portion of the sprint, causing the feature I was implementing to be delayed

JK

Efficiency

Starting each Daily Scrum with a riddle was a fun way to start my day, and helped to keep me engaged in my work

VW

Teaching junior team members how to manage our code repository translated into bugs getting addressed more quickly

JK

The Scrum Board, our main information radiator, wasn't kept up to date which resulted in team members producing duplicate work

AB

Being paired with a senior engineer to complete tasks improved my output during this sprint

AB

Communication

Poor communication with our Marketing team led to a misunderstanding - they created an advertisement highlighting a feature we removed

VW

We began meeting with the design team regularly during this sprint which improved cross-team communication

LM

Miss Management

Our Daily Scrum didn't start at the same time every day which made it harder to schedule my mornings

LM

I disliked that our Daily Scrums took longer than normal due to discussions that didn't feel relevant to the whole team

JK

Improvement Actions

Ensure that Daily Scrum start on time
and does not run over 15 minutes

JK

Ensure that topics should be relevant
for discussion on Daily Scrum

AB

Create senior and junior software
developer pair

LM

Find more accurate ways for
communication

VW

Frequent updates of Scrum Boards
needs to be implemented.

VW

Team Appreciation

Product owner-spent lots of time with
us this sprint. Really appreciated.

GM

Development team - Great work

LM

Good Job

VW

Special appreciation for the dedicated work through out this sprint.

AB

For teaching juniors special tanks.

JK
